Say goodbye to manual job inputs with Roadrunner AI

AI that turns paper notes into jobs

Simply take a photo of your handwritten order forms and email them to Roadrunner AI email address. The system scans the image, extracts all key delivery details, and instantly builds a digital job record — no typing required.

Faster, smarter transport admin

Roadrunner AI eliminates repetitive data entry, speeds up job creation, and ensures every delivery is added to your TMS with total accuracy. This means less admin, fewer errors, and more time to focus on planning and dispatch.

Efficiency

Whether you manage a few vehicles or a multi-depot fleet, Roadrunner will help control your daily operations with greater insight and efficiency. Boost performance and execute your day-to-day traffic operations through our live intuitive software.

A transport management system for all businesses

Roadrunner is a full-featured transport management system, able to manage all types of transport businesses from one-man operations and pallet network operators up to multi-depot with a variable fleet and order types.

Roadrunner lets you manage your day-to-day traffic office tasks, from ordering to planning, job sheets to invoicing and more. It's easy to use, drives efficiency, and puts you in complete control of your workflow to spend more time developing your business.

Our Transport Management System eases your workload

The Roadrunner transport management system is a flexible solution designed to work the way you do. It is also fully scalable and will work with you no matter your company's size or how fast you grow.

Roadrunner contains a wealth of features to ease your workload and help you run your business more efficiently and effectively. Roadrunner has everything you'll need from an online traffic portal, live signature capture for deliveries, online PODs and data links with their customers or suppliers.

Other key features:

- Design your own traffic sheet, formats and filters
- Full job analysis and KPI reporting
- Flexible customer and subcontractor rate tariffs
- Easy to create your own interfaces to share information with customers and suppliers
- Equip your drivers with handheld devices for live updates to jobs at definable points in their journey

Roadrunner Live features:

- Customer or user login
- Live planning and revenue dashboards
- EDI management
- Request transport instantly
- Track consignments in real time
- View PODs immediately
- Print consignment labels
- View 'dynamic' estimated time of delivery and collection

Unique features from Roadrunner

Improve Efficiency

Save time and control your road transport and logistics operations with greater efficiency and better insight and visibility.

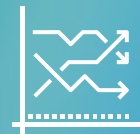

Book Jobs Online

Save on admin time and offer jobs to private companies or partnered hauliers through the online self-service portals.

Flexible & Scalable

Roadrunner software is very flexible and scalable. It's designed to work with a wide range of road transport and logistics operators.

Revenue Performance

Review how your business is performing daily, weekly or monthly basis and make accurate financial management decisions.

Valuable Analytics

Uncover valuable trends from your fleet and optimise your transport operations to drive continuous improvements.

Respond In Real Time

Never miss a thing with real-time information at your fingertips. Spot critical fleet data at a glance and respond quickly to potential issues.

Proof Of Delivery

No more waiting for paperwork. Real-time, on-screen proof of delivery confirmation from the moment it's been scanned.

Streamline & Optimise

Streamline your business and avoid repetitive work by optimising every stage of the delivery process, from booking to invoicing.

Integrate Tracking

Never miss a thing with live status updates. Receive real-time info on jobs, deliveries, drivers and vehicle telematics with DOT Tracking.*

Review your fleet's revenue performance, spot trends, and gain better insight into your fleet's performance daily, weekly, or monthly. Roadrunner gives you complete control and helps you make the right decisions at the right time.

Roadrunner platforms:

Utilise your existing hardware to host Roadrunner or use our managed cloud-based solution.

Roadrunner Driver ePod app

The Driver ePOD app is fully integrated into the Roadrunner TMS and is a paperless digital solution designed to eliminate paperwork and automate your delivery paperwork processes. Send your driver's jobs, shipments and consignments to their smartphone instantly.

Track and capture your mobile delivery activities via the Roadrunner Driver ePOD smartphone app. Every delivery event is tracked and given a precise GPS location and position on the map. Further, more configurable proof of delivery events are captured instantly, such as signatures, notes, images and electronic PODs.

Drivers can capture signatures and record discrepancies at the pallet and job level. Take your delivery operations digital, improve efficiencies and dramatically transform your business.

Exports to third party account packages

Roadrunner exports to Sage, and most standard accounts packages and bespoke solutions are also available.

Roadrunner POD scanning

The Roadrunner workflow module allows for the generation and storage of paperless proof of delivery documentation via the Roadrunner driver app. The POD scanning will store and provide access to all scanned documentation combined with signature captures for printing and emailing from the Roadrunner client or accessible through Roadrunner Live.

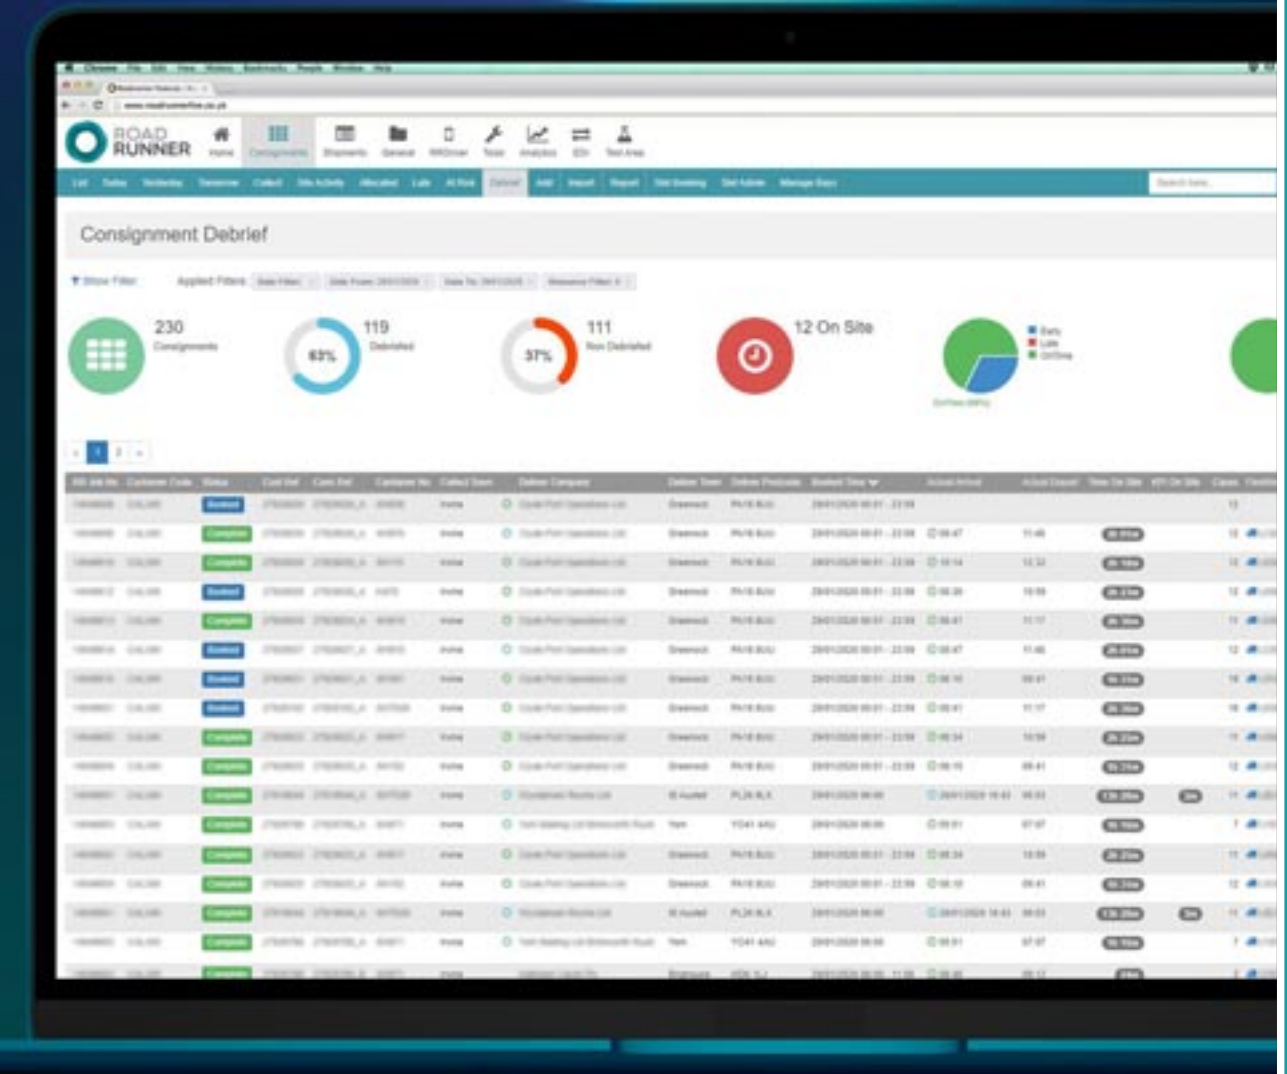

Vehicle run planner and empty running

Roadrunner gives you a real-time view of the vehicle's route and automatically adds dynamic run totals. Empty running can be automatically generated, and you can add additional empty running legs within a few clicks. All of which can be instantly viewed from within Roadrunnerlive.

Postcode to postcode distance generator

Roadrunner will automatically calculate distances from postcode to postcode for collection and delivery points, either point to point or at each run stop. It also automatically generates a rate for the job based on those postcodes.

Create a geofence for particular locations to enable you to track and report on your vehicles and delivery activities in or around this area. Receive live automatic notifications for geofence arrivals, departure times, and vehicles running over specific waiting times.

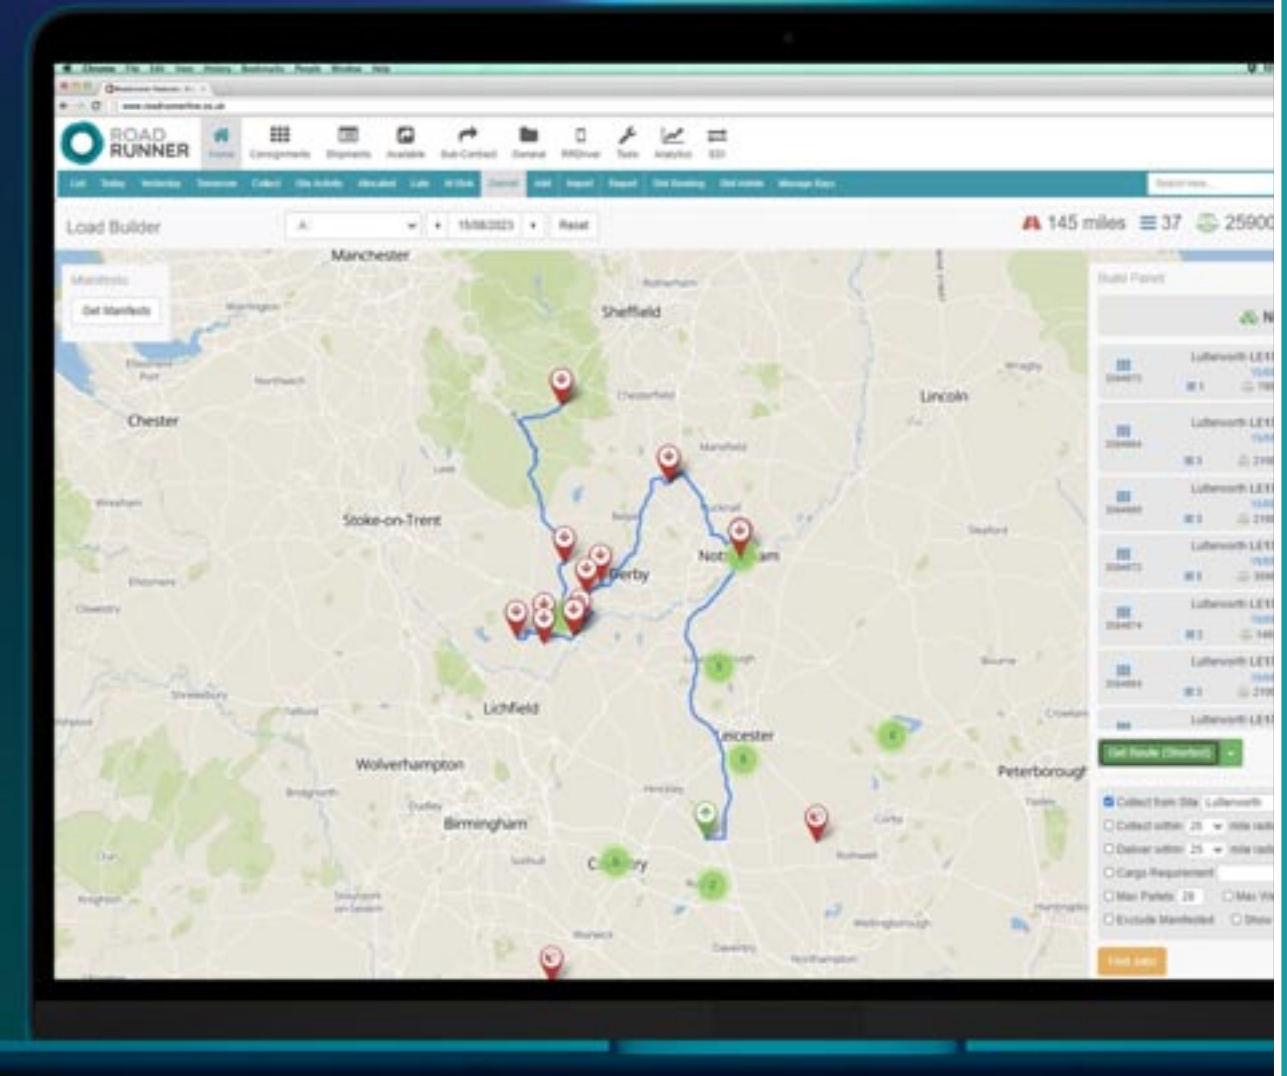

Quickly build your delivery manifests within a few clicks

Say goodbye to tedious manual processes and hello to effortless efficiency. Roadrunner's latest software offering, the Manifest Load Builder, uses intelligent algorithms to create delivery manifests and the most efficient delivery and collection routes within a few clicks.

The Load Builder map dashboard shows all the collection and delivery consignment pins on a map. When you hover over a consignment pin, you can view the delivery details, including the number of pallets, weight, revenue, and mileage. You can also drag and drop your mouse across the map to create a Manifest from the selected area.

Once the Manifest has been built, the dashboard will show the number of pallets, weight, revenue, mileage, and distance. A delivery trail on the map showing the most efficient route will also help you reduce mileage and improve your carbon footprint. If you are looking to optimise delivery and collection routes and be faster and more efficient, Roadrunner Manifest Load Builder makes it easy.

A paperless ePOD App and Driver Workflow System

Streamline your delivery processes

The paperless driver workflow

Create a tailored step-by-step paperless workflow that will boost productivity and enhance efficiency. Use the Roadrunner Driver ePOD app to capture the data you need when you need it.*

Reduce Admin Time & Costs

Streamline Your Admin Processes

Eliminate Paperwork

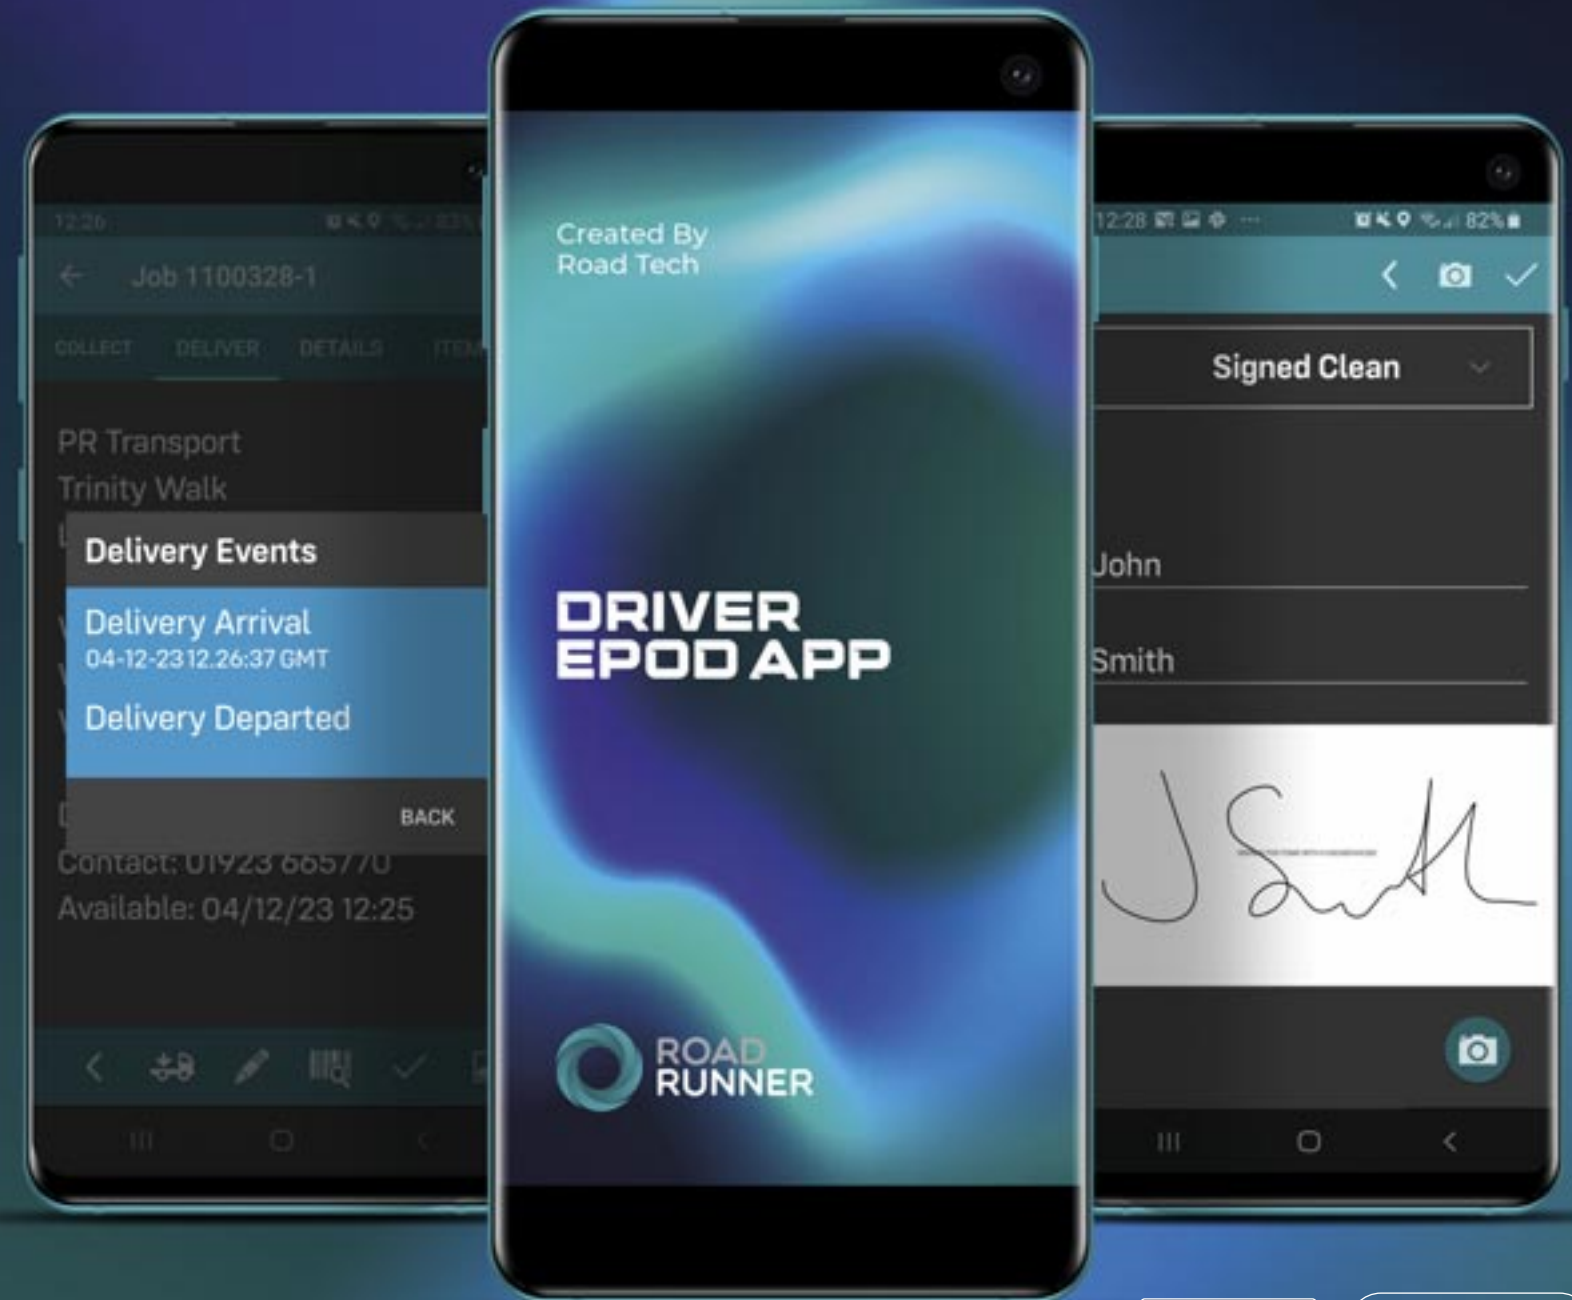

Keep Your Driver's Well Organised

Capture ePOD Data Digitally

Invoice Customers Instantly

The Driver ePod app tracks every delivery with precision

Reduce repetitive tasks and save time

Roadrunner enables jobs to be booked online via the web, client portal, or EDI transfer, reducing repetitive tasks and making the process quicker and far more efficient.

Send delivery tasks to your driver's smartphone

Organise and assign tasks to your drivers to provide clear step by step instructions and effective communication regarding all collections and deliveries. Receive instant driver feedback regarding collected trailer and container numbers and progress updates directly into the job.

Setup automatic notifications to provide a clear view of progress

Provide your customers and traffic office with live automatic notifications at each stage of the delivery process, giving them a transparent view of the progress of deliveries.

Capture every delivery event via the Driver Epod App

Arrival and departure times are captured and sent directly to the Roadrunner dashboards keeping everyone updated regarding the job's progress. Capture waiting times and discrepancies with photo evidence if required,

along with an electronic signed collection and delivery note that can be automatically sent to your customer.

Scan barcodes to capture data and automate processes

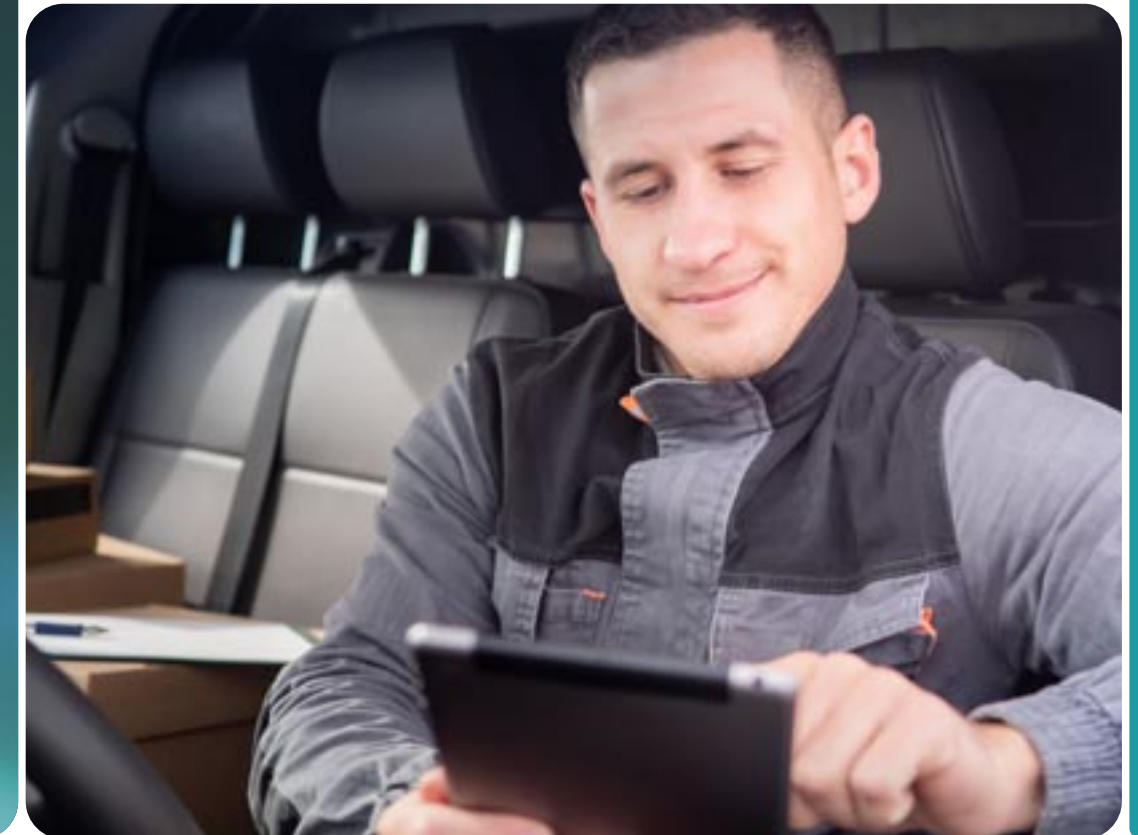

Customers can print barcode labels that the driver can then scan at the collection point. The driver can also indicate the package is damaged if they need to.

Branded delivery notes are instantly created and sent**

All electronic collection and delivery paperwork are designed with your company's branding. Receipts can be sent to collection and delivery points if necessary, together with a branded POD to your customer. All electronic paperwork is available on the RoadrunnerLIVE portal so that your customers can access the information as and when required.

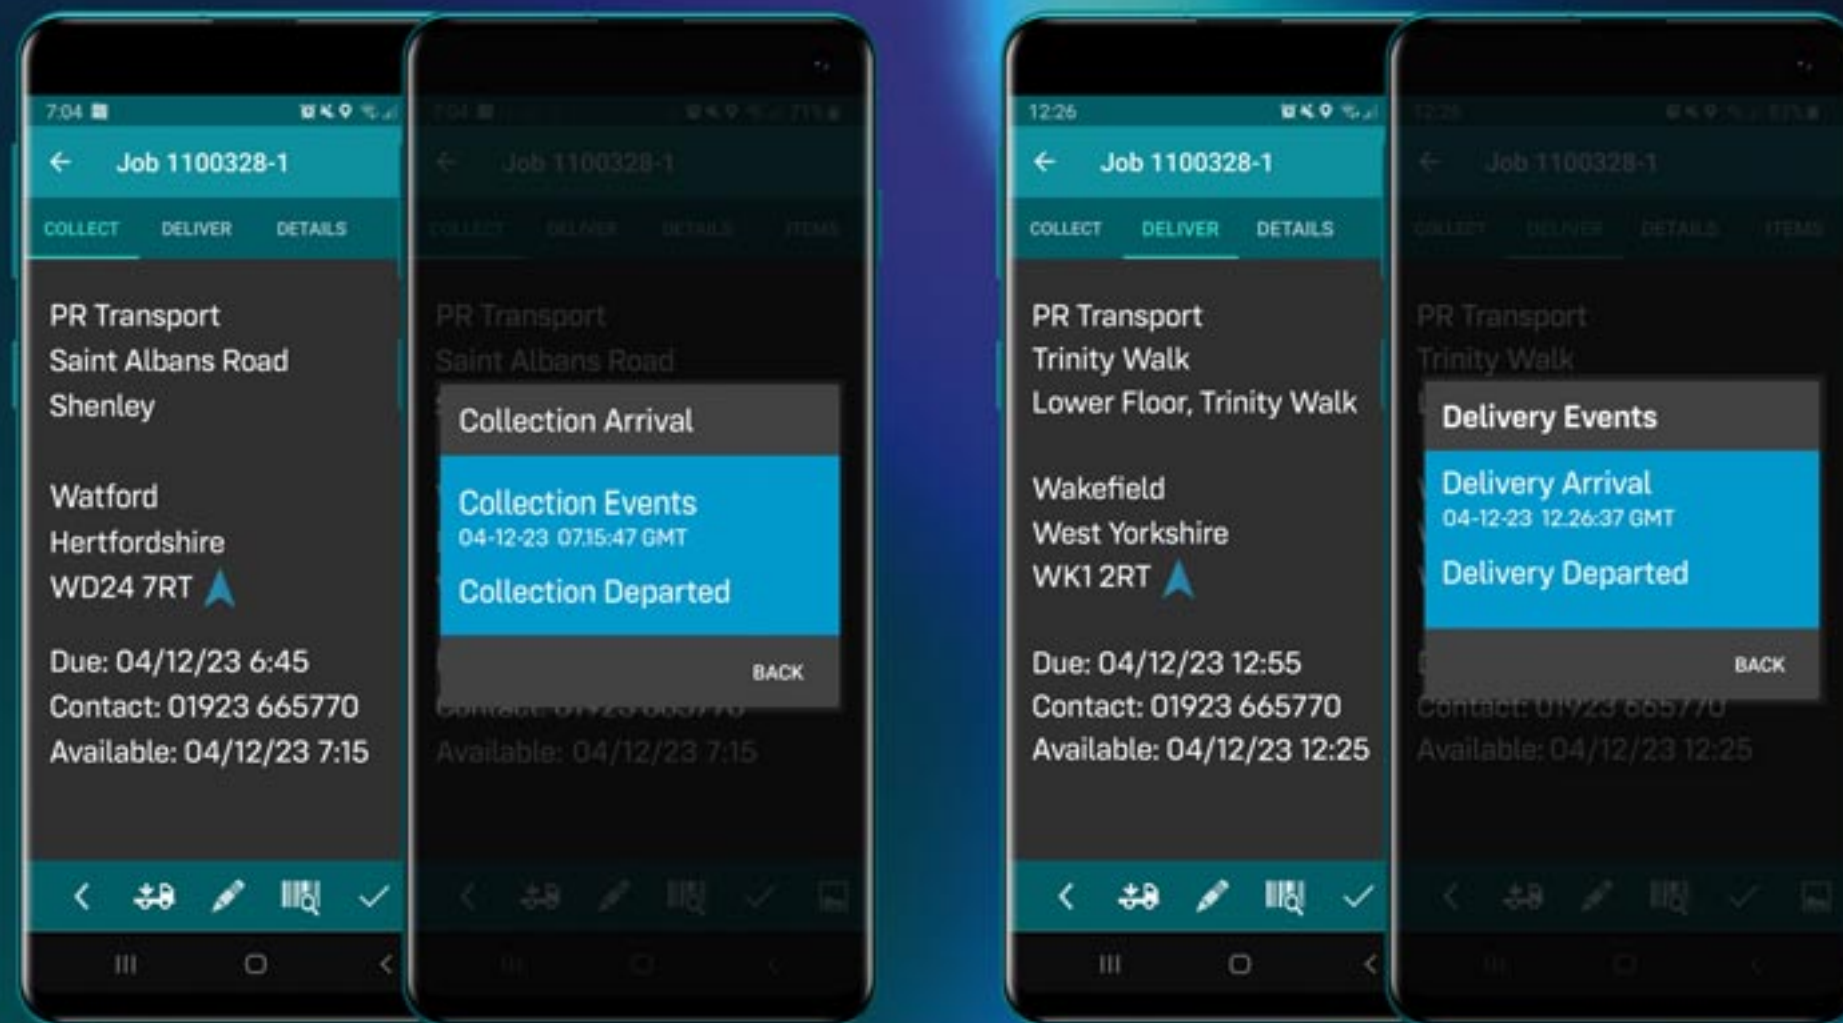

Improve cash flow with automated invoicing

Eliminate lost paperwork by capturing PODs as part of the driver workflow. Take photographic evidence to reduce invoice queries. Reduce admin time by automating the process and sending POD evidence with invoices to reduce slow payments and improve cash flow.

The Driver ePOD app workflow collection and delivery points

The Driver ePOD app integrates with the Roadrunner system and helps automate your delivery processes, eliminates paperwork and sends an ePOD to customers.*

SUBBY APP**

Eliminate lost paperwork and automate your delivery process with the Driver Subby app. Track your sub-contractors and deliveries in real-time, with each event given a precise GPS location and position on the map. Improve customer service and transparency while reducing paperwork and errors in delivery operations.

The Driver Subby app seamlessly works with Roadrunner TMS, enabling you to take advantage of a tailored, step-by-step, guided workflow. Each delivery workflow can be specifically designed for you.*

The app provides the driver with all the required details, from job manifests, number of pallets, cases, weight and delivery instructions, and the planned collection times and deliveries.

Drivers can capture signatures, notes, photos, and electronic PODs, including pallet and job-level discrepancies. Take your delivery operations digital, improve efficiency and dramatically streamline your business while reducing your environmental impact.

Our commitment to your security

At Road Tech, we prioritise security and excellence in everything we do. Our **ISO 27001:2022** certification is not just a credential; it demonstrates our relentless dedication to protecting your information and providing solutions that you can trust. Partner with us for resilient outcomes that ensure your peace of mind.

ISO 27001 Certification:

At Road Tech, security has always been a core priority. Our ISO 27001:2022 certification reflects our unwavering dedication to safeguarding information and delivering secure, resilient, and trustworthy solutions to our clients.

We hold ISO 27001 certification across all our software products: Tachomaster, DOT Tracking, Roadrunner, Checkmaster, and PreDrive. This internationally recognised certification demonstrates our robust Information Security Management System (ISMS) and reinforces our commitment to maintaining the highest standards of confidentiality, integrity, and availability of client data.

What is ISO 27001?

ISO 27001 is the international standard for Information Security Management Systems (ISMS) standard. It provides a comprehensive and systematic framework for managing sensitive company and customer information, ensuring it remains secure and protected against cyber threats, data breaches, and unauthorised access. By adhering to the rigorous requirements of ISO 27001, organisations demonstrate their commitment to safeguarding information, mitigating risks, and fostering trust with their clients and partners.

The Journey to ISO 27001

Achieving ISO 27001 certification is no small feat. The process requires a deep and comprehensive evaluation of an organisation's policies, processes, and controls to ensure they align with the standard's requirements.

At Road Tech, we always take a proactive and structured approach to all challenges, included ISO 27001:

Assessing Current Practices: We began by thoroughly auditing our existing information security practices. This helped us identify strengths, pinpoint improvement areas, and define a clear roadmap toward compliance.

Developing Robust Policies: We established and refined our information security policies, which are designed to protect sensitive data, manage risks, and ensure compliance with regulatory requirements. These policies address areas such as access controls and encryption, incident response, and employee awareness.

Employee Engagement and Training: Information security is a shared responsibility; our team has been at the heart of this journey. We conducted comprehensive training sessions to raise awareness about the importance of information security and ensure all employees understood their roles in maintaining it.

Implementing New Technologies: To enhance our security posture, we invested in cutting-edge technologies and tools that align with ISO 27001 standards. These solutions enable us to monitor, detect, and respond to potential threats efficiently.

Continuous Improvement: Achieving ISO 27001 certification is not a one-time effort. We have established robust internal audit processes, management reviews, and continual improvement cycles to ensure our ISMS evolves with the changing threat landscape. This commitment to continuous improvement should reassure our clients and partners of our dedication to their security.

The Benefits for Our Clients

Achieving ISO 27001 certification isn't just an internal accomplishment; it's a commitment to our clients and their peace of mind. Here are some of the ways this Certification has made a difference for our clients:

Enhanced Data Security: Clients can trust that their information is handled within a framework that meets internationally recognised information security standards.

Proactive Risk Management: By continuously identifying, assessing, and treating risks, we reduce the likelihood of security incidents and service disruptions.

Regulatory and Contractual Compliance: ISO 27001 supports alignment with legal, regulatory, and contractual obligations, reducing compliance-related risks.

Increased Trust and Transparency: ISO 27001 certification demonstrates our dedication to transparency and accountability, strengthening our clients' trust.

Competitive Advantage: Partnering with an ISO 27001 certified organisation demonstrates a shared commitment to operational excellence and security, giving our clients a clear edge in the marketplace.

Looking Ahead

We remain focused on building a culture of security and continuous improvement. ISO 27001 certification is not the end of the road but a foundation for future growth and innovation. We're committed to maintaining the highest standards and delivering secure, dependable solutions that empower our clients to succeed.

We extend our heartfelt gratitude to every member of the Road Tech team for their dedication and hard work in setting the highest benchmarks for excellence and security in our industry.

The future of fleet management

Discover how to plan, monitor, manage, report and capture results. Our software can highlight anomalies, expose patterns, simplify daily operations and help drive continuous improvements.
